

Tips for your stixta

1. Which format do I need?

We need your design in vector format.

Therefore, your logo should optimally be uploaded as an .ai, .eps or vector-based .pdf format.

We can process all other formats like .jpeg at an additional cost.

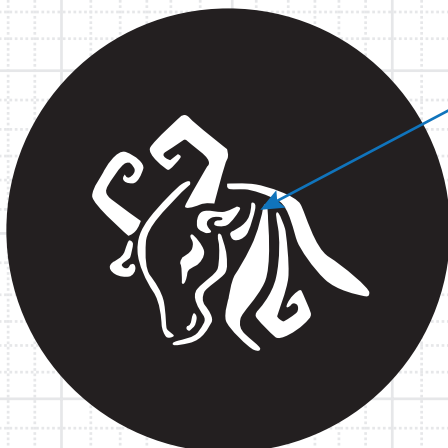

2. Which colour can my stixta be in?

We currently mainly offer our stixta in the colour black. However, we work on being able to offer you all different colours in the near future.

In general, we are open towards all special requests and solutions in colour. Please keep in mind that the decals can be only two-coloured at a maximum. Just send us an inquiry

3. What can be the grade of detail of my design?

All the see-through points are cut out (the holes within the black sticker). What remains in the sticker are the adhesive black areas, which should not be too filigree. This characteristic limits a little bit of the details level of the stixta.

Basically, filigree lines should not be smaller than 2pt in Adobe Illustrator. Individual spots may be larger when attached to a larger area.

Should the uploaded logo be too detailed or filigree, we will adapt it and send you the adapted design.

4. Which part of my stixta can shine?

The glowing part of your logo can not be greater than the area of the Apple logo on your MacBook.

Your logo will always be scaled by us in exactly this size. We are open to meet your special requests and we will customize the subject so that only a certain part should light.

Here you can see an example:

Should you have any further questions, just ask in the contact form or send us an e-mail to support@stixta.com
